REVISION EYEWEAR REVEALS THE BULLET ANT™ BATTLEFIELD TACTICAL GOGGLES FOR THE MILITARY

WILLISTON, VT, September 16, 2005 – Revision Eyewear Ltd., developers of purpose-built eyewear for the military worldwide, is proud to announce the availability of their new Bullet Ant Tactical Goggle. As battlefield eye injuries were on the rise, Revision took the lead in high-impact resistant eyewear with the Sawfly™ Spectacle Military Eyewear System. Now the Bullet Ant Tactical Goggle exceeds military protective standards with a slim-profile design incorporating a wide field-of-view with helmet and night-vision gear compatibility.

The Bullet Ant Tactical Goggle shields the eyes from a variety of unexpected and dangerous fragments with its high-impact protective lenses made from the best optical grade polycarbonate. The neutral gray, clear and high-contrast interchangeable and scratch resistant lenses provide 100% UV-A, UV-B and UV-C protection without distortion. The Bullet Ant provides a comfortable facial fit with hexo-vents permitting maximum ventilation, fog-free performance and fine particle filtration. The adjustable strap can be worn under or over the helmet for short term tactical use or long term wear. A “press fit” prescription carrier insert is available that gives eyeglass wearers vision correction coupled with high-impact protection.

“Today, soldiers don’t go on patrol without wearing their body armor because they know the value of the protection the armor offers,” Jonathan Blanshay, President and CEO of Revision Eyewear Ltd. commented. “Just as body armor protects the body from high velocity fragments, the Bullet Ant Goggle protects the eyes. When over 90% of eye injuries can be prevented, it makes sense to wear a goggle that not only keeps out wind, dust and debris, but also provides the highest standards in impact protection, and that goggle is the Bullet Ant Tactical Goggle.”
